

Understanding Truck Drivers

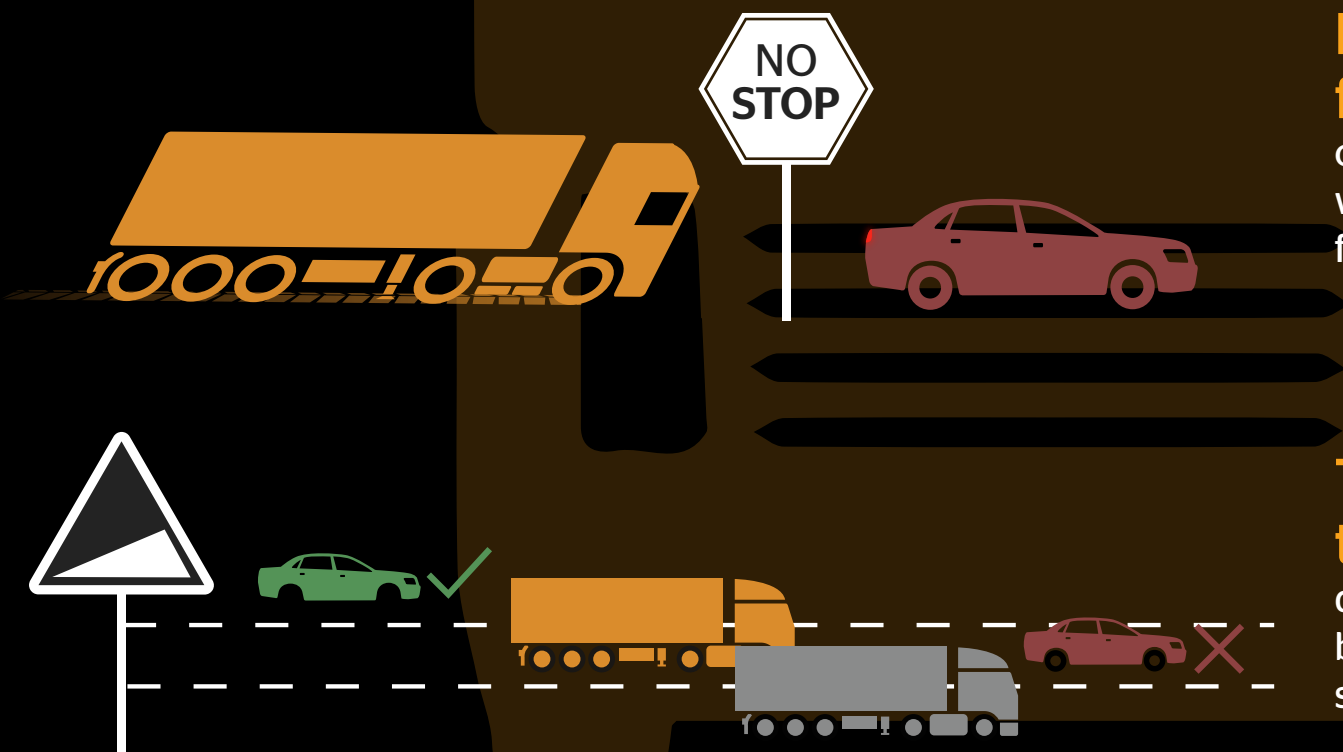

INCLINES

Trucks lose speed on steep inclines,
especially if they are carrying cargo.

Keep in mind

On an incline, the speed of the truck in front of you may differ greatly from the speed of your car, so be sure to gauge distances carefully.

Do not cut off a truck or force it to stop in the middle of an incline. You will leave it stuck with no way to pick up speed again for several kilometers.

Trucks use inclines to pass other trucks that are driving slower. Make the first move by getting into the fastest lane to stay out of their way.
